

Exercise 1.2

=== TASK ===

Copy the following into `main.py`

```
x = input("Please enter a number:\n")
y = input("Please enter another number:\n")

print(f"The numbers entered are {x} and {y}")
```

Edit the code so that your program outputs the result of multiplying `x` and `y`.

For example, if the user enters `4` and `5` your program should output the following.

```
Please enter a number:
4
Please enter another number:
5
The result of multiplying 4 and 5 is 20.
```

Note that to pass the tests you must have exactly the output above, apart from the numbers which will differ depending on what the user inputs.
