

Exercise 4.1

=== TASK ===

Write a program that asks the user to enter a series of non-zero integers, one at a time.

The program should keep asking the user for a number until they enter a value of 0.

The program should then display the average of the numbers that have been entered.

A good starting point would be The Sum Numbers Program.

For example if 3 and 6.1 are entered

```
This program calculates the average of a series of numbers entered.  
Please enter a number. Enter 0 to stop  
3  
Please enter a number. Enter 0 to stop  
6.1  
Please enter a number. Enter 0 to stop  
0  
The average of the numbers entered is 4.55
```

And if no numbers are entered:

```
This program calculates the average of a series of numbers entered.  
Please enter a number. Enter 0 to stop  
0  
No numbers entered.
```

Note that to pass the tests you must have exactly the output above, apart from the numbers which will differ depending on what the user inputs.
